

PROJECT DOCUMENTATION

Case Study – www.atamana.nl

Project name	<i>Atmana Bouwkundig Adviesbureau (Atmana architectural consultancy agency)</i>
Assignment	Freelance engineer and founder of the architectural consultancy agency <i>Atmana</i> wanted to have a professional website made for his agency. After contact with <i>Scalda</i> for an internship student in the field of engineering, <i>Scalda</i> proposed that he could have his <i>Atmana</i> website maintained by some of the IT students. He agreed and let an IT student maintain his existing website for marketing purposes with additional information and a different lay-out.
Project team	The project team included the freelance engineer himself together with a student of <i>Scalda</i> (a Secondary Vocational Education Institute) and the maintenance of this website was part of an IT class.
Project goal	This web site provides information about the different work activities of <i>Atmana</i> . His engineering proceedings consist of three things, namely; advise, drawings and licences and with this website <i>Atmana</i> tries to increase its customer base.
Client requirements	The client requirements were not very difficult. The <i>Atmana</i> website was an existing one, but need some lay-out changes, like the background, way of presenting the website information, website navigation, photo's etcetera. Besides that the website needed additional information concerning the working activities.
Method of work	First of all the <i>Scalda</i> student start to work with the existing CMS and website lay-out. The client presented his wishes according to examples of other websites and the student started to change the <i>Atmana</i> website according to his wishes. After some contact and examples, the client and the student selected a certain format. When that part of the website was taking care of, the client presented the content for the website in written text ("Word" format", and the IT student start to work with this text. Finally the website was delivered after four weeks and after some testing and finishing touch, the renewed <i>Atmana</i> website was launched.
Web content	In contrast with other websites the client liked a very simple and basic lay-out and content. He wanted a standard home page and contact page, and besides that he wanted information about his three main working activities. Namely engineering advise, architectural drawings and architectural licences. On these three pages some information is presented.
Used software	Because the clients website was already a regular hosted one, instead of a free open source, the student worked with the "Site Apps" CMS. Besides that he used "Photoshop" and "Word" to adjust the lay-out, photo's and logo and of course for the presented text.
Scalda Teacher comment	<i>"It is a very professional website, with a clear lay-out. The information is presented in a different way than usual and ensures that visitors can immediately see where the website was created for and where they can find information about certain topics. The layout fits nicely with the purpose of Atmana, it suits well an architectural consultancy agency. The content is fine, with concise text that present exactly what you can expect. Finally, the logo and pictures are adjusted too and this fits well to the total and therefore it is a nice, well organized website with everything needed."</i>
